The platform

PRISMORA is the distribution management system for Janki Herbals. It carries the whole commercial chain in one place — leads, orders, batch inventory, dispatch, invoicing and channel-partner accounts — so that a bottle of Herbal Hair Oil can be traced from the purchase order that stocked it to the invoice that billed it.

It runs entirely in the browser. There is nothing to install: open the address, sign in, and the screens you get are decided by your role. Everything is priced in rupees, carries HSN codes and GST percentages, and follows Indian financial conventions throughout — figures compact to ₹1.4L and ₹2.6Cr rather than millions.

What it covers

- **Sales & CRM** — a drag-and-drop lead pipeline, field-force tracking with GPS attendance and beat plans, customer records and territory mapping.
- **Operations** — orders through a four-stage fulfilment pipeline, batch inventory issued earliest-expiry-first, purchase orders and goods receipt, and the three partner tiers.
- **Financials** — tax invoices, expenses, credit notes, running-balance ledgers for every partner and vendor, discount schemes and the incentives they generate.
- **Analytics** — reports across five categories, plus **PRISM**, a built-in assistant you can ask questions in plain English.

The three partner tiers

Below the company sit three levels, each buying at its own price and each reporting to the one above. A distributor covers a region; dealers sit under a distributor; retailers sit under a dealer. Every product in the catalogue carries four prices — MRP plus one for each tier — and a partner only ever sees their own.

TIER	REPORTS TO	BUYS AT	TYPICAL CREDIT LIMIT
Distributor	The company	distributorPrice	₹2,00,000 - ₹5,00,000
Dealer	A distributor	dealerPrice	₹1,00,000
Retailer	A dealer	retailerPrice	₹50,000

PRISM, the built-in assistant. Admin-tier users get a floating button at the bottom-right of every screen. Ask it questions the way you'd ask a colleague — “*which distributors haven't ordered in 60 days*”, “*show me dead stock*”, “*kitna outstanding hai*” — and it answers from live data. It understands typos and follow-ups, so “*and for Gujarat?*” continues the previous question.

§ Signing in

One login page serves everyone — staff and channel partners alike. What you can see and do afterwards is set entirely by the role on your account.

- **Staff accounts** are created for you by a Super Admin under **Settings** → **Users**. You cannot self-register as staff.
- **Partners self-register** from the links under the sign-in button, then wait for approval — see [Onboarding a partner](#).
- If your registration is still being reviewed you'll be told “*awaiting admin approval*” rather than that your password is wrong. A rejected registration says so plainly.
- Use the **sun/moon toggle** in the top bar to switch between light and dark. Your choice is remembered on that device.

Three things follow your role everywhere. **Module access** decides which pages appear in the sidebar at all. **Access level** decides whether you can only look (`view`) or also change things (`full`). **Record ownership** decides whose data you see within a page: an admin sees everything, a manager sees their own plus their team's, and everyone else sees only what is assigned to them.

§ Who does what

Twelve roles. Find yours — the third column is where you'll spend your day.

Super Admin COMPANY	Full control of everything, including user accounts, the product catalogue and the audit log. Can override any order stage when something is stuck.	Every screen
Director COMPANY	Oversight. Reads across the whole business and owns the financial picture, but doesn't work the operational queues.	Director Dashboard · Accounting · Reports
Sales Manager SALES	Runs a team of sales executives. Sees their own records plus every record belonging to the executives listed under them, and assigns work between them.	Leads · SFA · Customers · Geography · Reports
Sales Executive SALES	Works leads to conversion, raises orders, logs field visits and claims expenses. Sees only records assigned to them.	Leads · SFA · Orders · Complaints
Warehouse Manager OPERATIONS	Owns physical stock — batches, expiry dates, adjustments and transfers between godowns. Clears orders for dispatch once the goods are genuinely on the shelf.	Inventory · Orders

Dispatch Team OPERATIONS	Ships cleared orders and marks them delivered. This is the step that deducts stock and raises the invoice, so it is the one to get right.	Orders
Purchase Manager OPERATIONS	Buys stock in. Raises purchase orders to vendors, books goods in against them, and handles returns of damaged or wrong supply.	Purchases · Inventory
Accounts FINANCE	Invoices, payments, credit notes and expenses. Approves partner scheme claims and marks incentives paid.	Accounting · Claims · Incentives · Reports
Customer Support SERVICE	Owens the complaints queue end to end and keeps customer records current.	Complaints · Customers
Distributor PARTNER	Places their own orders at distributor pricing, confirms deliveries, tracks their outstanding balance and claims scheme benefits.	My Orders · Ledger · Claims · Stock · Price List
Dealer PARTNER	The same portal at dealer pricing, sitting under a parent distributor.	My Orders · Ledger · Claims · Stock · Price List
Retailer PARTNER	The same portal at retailer pricing, sitting under a parent dealer.	My Orders · Ledger · Claims · Stock · Price List

01 Lead to customer

The Leads board is a kanban — drag a card to the next column to move it along. Nine columns, worked left to right.

Lead pipeline

Leads · owned by Sales Executive, visible to their Sales Manager

Lead Created	Sales Executive	Capture name, company, state, city, phone
Call	Sales Executive	First contact made; set a follow-up date
Sample Sent	Sales Executive	Product samples despatched
Meeting	Sales Executive	Face-to-face or call scheduled
Negotiation	Sales Executive	Pricing and terms under discussion
Distributor Approved	Sales Manager	Cleared to trade with us
First Order	System	An order is raised automatically
Active	—	Now a trading customer

Or:

drag to

Lost

at any point. Moving a lead back out of a converted column cancels the order that was auto-created for it.

Set a follow-up date on every live lead. Leads due today raise a notification and a pop-up toast when you sign in — but only for leads that carry a date. An undated lead is a lead nobody will be reminded about.

02 Order to invoice

The busiest workflow in the platform, and the one with the strictest hand-offs. Each stage can only be set by the role that owns it — a Super Admin can override, nobody else can skip ahead.

Order fulfilment Orders · stage owners enforced

Pending

Sales, or partner portal

Order raised. Anyone may set this stage.

Processing

Sales Executive · Sales Manager

Accepted and handed to the warehouse

Ready for Dispatch

Warehouse Manager

Stock picked and confirmed on the shelf

Shipped

Dispatch Team

Goods have left the godown

Delivered

Dispatch Team

Stock deducted · invoice raised · balance updated

Delivered is the money step. It deducts the batches, generates the tax invoice, and adds the value to the partner's outstanding balance — all at once. Sales roles hand off entirely: they get a single *Assign to Warehouse Manager* action rather than the full pipeline.

What happens the moment you mark it Delivered

- **Stock comes off, earliest expiry first.** The system drains the batch closest to expiring before touching fresher stock, so nothing quietly ages out at the back of the godown. Batches with no expiry date are used last.
- **An invoice is raised** against the partner, dated 30 days out, and their outstanding balance goes up by the order value.
- **The order is stamped as fulfilled.** If it is ever set back to Delivered a second time, stock and billing are deliberately skipped — you'll see a line in the audit log saying so.

Then the partner confirms

Marking an order Delivered is *our* record. The partner separately confirms they physically received it, from their own portal. Until they do, the order shows on their dashboard as awaiting confirmation and raises a notification for them. Both facts are kept, because they are not the same claim.

03 When stock is short

An order for 500 when 350 are on the shelf. You have two options, and the system will not let you simply push the order through.

Partial delivery One order, delivered in instalments

500 ordered

350 in stock

Forward stages are blocked

Deliver 350

Dispatch Team

Records the instalment; deducts 350

Partially Delivered

System

Shows **350/500** · 150 pending · no invoice yet

Restock 150

Warehouse Manager

Goods booked in via GRN

Deliver 150

Dispatch Team

Only the remainder is deducted

Delivered

System

Now the invoice is raised, once, for the full 500

You are billed once, at the end. Instalments deduct stock as they go, but no invoice is generated until the full ordered quantity has been met — which avoids part-invoicing the same order twice.

Or split the order instead

If the balance is going to take a while, **Split** the order rather than leaving it part-delivered. The available quantity stays on the original order and proceeds normally; the shortfall moves to a brand-new order that waits for restock. The two stay linked so you can trace one from the other.

Once anything has shipped, the quantity is frozen. An order that is Shipped, Partially Delivered or Delivered will not let you edit its quantity — changing it would put inventory and an already-raised invoice out of step. Use Split, or raise a fresh order.

04 Buying stock in

The mirror image of selling: goods arrive, stock goes up, and money starts being owed to a vendor.

Draft Purchase Manager
Vendor, line items and expected date

Confirmed Purchase Manager
Sent to the vendor

GRN Done Purchase Manager
Goods received and booked in

Closed Purchase Manager
Nothing further outstanding

Booking a GRN does three things at once: it adds the batches to inventory, marks the purchase order **GRN Done**, and increases what you owe that vendor by the received value. Record payments against the vendor to bring that balance back down; purchase returns credit it too.

Watching stock levels

Inventory flags every batch automatically, so you don't have to compare numbers by eye. Critical and expiring batches raise notifications for admins, managers and the warehouse.

FLAG	TRIGGER	WHAT TO DO
Out of Stock	quantity = 0	Raise a purchase order now
Critical	≤ 50% of reorder level	Raise a purchase order now
Low Stock	≤ reorder level	Plan the next purchase order
Expiring Soon	≤ 60 days to expiry	Push it out first — it is already being issued first
OK	above reorder level	Nothing

05 A field day

SFA is the field executive's screen, worked in order through the day. Attendance is GPS-stamped, so mark it where you actually are.

Field executive's day SFA · Sales Executive

Mark attendance

Morning

GPS check-in captures your location

Open beat plan

Morning

Today's assigned route of outlets

Log each visit

Through the day

Outlet, outcome, orders taken

Claim expenses

End of day

Travel and other costs, receipt attached

Pending

Sales Manager

Reviews and approves the claim

The **Performance** tab turns all of this into coverage and productivity figures for you and your manager. Attach a receipt photo to every expense claim — approvals are quicker when there is something to look at.

06 Partner self-service

Distributors, dealers and retailers sign in to a portal of their own. Explain this flow when you onboard them.

Partner ordering My Orders · Distributor, Dealer or Retailer

Build a cart

Partner

Catalogue priced at their own tier

Scheme applied

System

Any eligible discount is shown live

Pending

System

Order enters the normal fulfilment pipeline

Confirm receipt

Partner

They acknowledge the goods arrived

Placing the order also **earns any incentive** the order qualifies for under an active scheme. It lands in their Incentives screen marked **Earned**.

Alongside ordering, a partner gets four read-only screens: **Ledger** (every invoice as a debit, every payment as a credit, with a running balance), **Stock** (what's available to order), **Price List** (their tier's prices, exportable) and **Claims**.

07 Onboarding a partner

Partners register themselves; somebody at the company has to approve them before they can trade.

Partner registration Approved on Distributors · Dealers · Retailers	
Registers	Partner Fills the form linked from the sign-in page
Pending	System Partner record <i>and</i> login both created, both held
Awaiting review	Admin · Manager Appears in notifications and filtered lists
Active	Admin · Manager Approve — record and login both go live
Approve or reject from the partner's own page — Distributors, Dealers or Retailers — using the shield buttons on any row marked Pending . Filter the list by <i>Pending</i> to find them. Rejecting deletes both the registration and the login; it is not reversible, so check the GSTIN first.	

§ Complaints, schemes and claims

Complaints

Complaint handling Complaints · Customer Support	
Registered	Anyone Logged against a customer, product and batch
Under Review	Customer Support Being investigated
Resolved	Customer Support Resolution text is required
Closed	Customer Support Signed off
Always record the batch number . It is what makes a quality complaint traceable back to a specific GRN and vendor.	

Schemes, incentives and claims

A **scheme** is a discount offer — set up by an admin with a validity window, a minimum order value, a target tier, and optionally a list of products it applies to. When a partner orders and qualifies, an **incentive** is generated automatically and marked Earned. A **claim** is the partner formally asking to be paid it.

Claim settlement

Claims · raised by partner, settled by Accounts

Raised	Partner Against a scheme and an order
Pending	Accounts Awaiting review
Approved	Accounts With review notes
Rejected	Accounts Reason recorded

If a scheme names specific products, only the value of **those** line items counts toward the minimum order value — not the whole cart.

§ Status vocabulary

The same word can mean different things on different screens. This is the full set.

WHERE	STATUSES, IN ORDER
Orders	Pending · Processing · Ready for Dispatch · Shipped · Partially Delivered · Delivered · Cancelled
Leads	Lead Created · Call · Sample Sent · Meeting · Negotiation · Distributor Approved · First Order · Active · Lost
Purchase orders	Draft · Confirmed · GRN Done · Closed · Cancelled
Invoices	Unpaid · Paid · Overdue
Complaints	Registered · Under Review · Resolved · Closed
Claims	Pending · Approved · Rejected
Incentives	Earned · Paid
Partners & staff	Pending · Active · Inactive
Inventory batches	OK · Low Stock · Critical · Expiring Soon · Out of Stock

What the platform tells you without being asked

The bell in the top bar collects eight kinds of alert, filtered to your role: critically low stock, overdue invoices, unassigned complaints, leads due for follow-up today, partner registrations waiting for approval, schemes expiring within seven days, orders sitting in your fulfilment queue, and — for partners — deliveries awaiting their confirmation.

§ Rules that will stop you

These are deliberate. If one blocks you, it is protecting stock accuracy or a customer's balance — work round it the way described, rather than looking for an override.

YOU TRY TO...	WHAT HAPPENS	DO THIS INSTEAD
Move an order to Ready for Dispatch, Shipped or Delivered without the stock	Blocked, naming the shortfall — <i>need 500, have 350</i>	Deliver partially, or split the order
Set a stage your role doesn't own	Blocked, naming the role that does	Hand off to that team
Change the quantity after goods have moved	The field is locked	Split the order, or raise a new one
Revive a cancelled order	Blocked	Raise a fresh order
Mark an already-fulfilled order Delivered again	Allowed, but stock and billing are skipped and the audit log records why	Nothing — this is the safeguard working
Deliver more units than are physically in stock	Blocked, naming what is available	Book the stock in via a GRN first

Everything is logged. Settings → Audit Log holds the most recent 300 events — every create, update and delete, every order stage change, every payment and every approval, with who did it and when. If a number looks wrong, start there.
