

Who Does What in PRISMORA

Find your job title. Read only your box. That is all you need.

First, the whole company in six steps

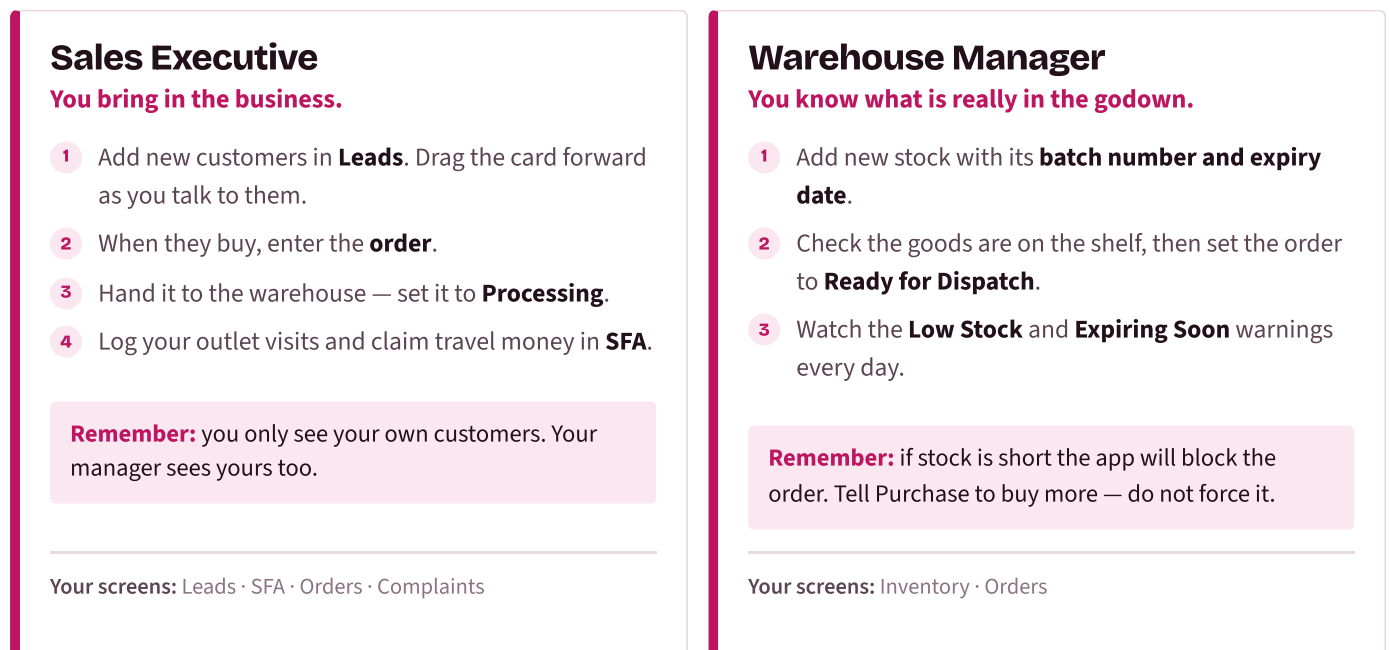

Every day, work moves left to right along this line.

Then it starts again at Step 1. Everything else in the app is just a way of looking at these six steps.

The order team

These four people move an order from start to finish. Each one hands it to the next.

Dispatch Team

You send the goods out.

- 1 When the goods leave the godown, set the order to **Shipped**.
- 2 When they reach the customer, set it to **Delivered**.

Careful — “Delivered” is the money button. One click takes the stock out AND makes the bill. Press it only when the goods have truly arrived.

Your screens: Orders

Accounts

You handle the money.

- 1 Mark a bill **Paid** when the money reaches the bank.
- 2 Record payments received from distributors and dealers.
- 3 Approve **scheme claims** and mark incentives paid.
- 4 Enter company expenses.

Remember: bills are created automatically when Dispatch marks an order Delivered. You never type a bill by hand.

Your screens: Accounting · Claims · Incentives · Reports

The supporting team

These five keep stock, people and problems under control.

Purchase Manager

You buy stock into the company.

- 1 Make a **purchase order** to a vendor and confirm it.
- 2 When the goods arrive, **book them in (GRN)**.
- 3 Pay the vendor and record the payment.

Remember: booking goods in does two things — stock goes up, and the money you owe that vendor goes up.

Your screens: Purchases · Inventory

Sales Manager

You run the sales team.

- 1 See every lead and order belonging to your executives.
- 2 Approve a new distributor by moving their lead to **Distributor Approved**.
- 3 Approve your team's **expense claims**.
- 4 Check team performance in Reports.

Remember: you see your own work plus everyone listed under you — nobody else's.

Your screens: Leads · SFA · Customers · Geography · Reports

Customer Support

You solve customer problems.

- 1 Log the complaint. **Always write the batch number.**
- 2 Move it along: Registered → Under Review → Resolved.
- 3 Write what you did to fix it before closing.

Remember: the batch number is what lets us trace a bad batch back to the vendor who supplied it.

Your screens: Complaints · Customers

Director

You watch the whole business.

- 1 Open the **Director Dashboard** for sales, money and stock at a glance.
- 2 Read the reports.
- 3 Keep an eye on the money owed to us.

Remember: you can see everything, but you do not work the daily queues. That is the teams' job.

Your screens: Dashboard · Accounting · Reports

Super Admin

You control the system.

- 1 Create staff logins and give each one a role.
- 2 Add products and set the four prices.
- 3 Approve or reject new partner registrations.
- 4 Unstick an order when a step was missed — only you can override.

Remember: only you can create staff accounts. Nobody can sign themselves up as staff.

Your screens: every screen

Your partners, outside the company

They get their own login. They see only their own business — never each other's.

Distributor

You buy from the company.

- 1 Put products in a cart and place your **order**.
- 2 When the goods arrive, click **I received it**.
- 3 Check what you owe in **Ledger**.
- 4 Claim your scheme benefits in **Claims**.

Remember: you see distributor prices. Dealers and retailers see different prices.

Your screens: My Orders · Ledger · Claims · Stock · Price List

Dealer

You buy under a distributor.

- 1 Order the same way, at **dealer prices**.
- 2 Confirm goods when they arrive.
- 3 Watch your balance in Ledger.

Remember: every dealer sits under one distributor. That link decides your prices and your schemes.

Your screens: My Orders · Ledger · Claims · Stock · Price List

Retailer

You buy under a dealer.

- 1 Order the same way, at **retailer prices**.
- 2 Confirm goods when they arrive.
- 3 Watch your balance in Ledger.

Remember: you are the last step before the shop counter. Your prices are closest to MRP.

Your screens: My Orders · Ledger · Claims · Stock · Price List

If you remember only one thing

Stock leaves and money is owed at the same moment — when Dispatch clicks **Delivered.**

Before that click, nothing has changed in the company's books. After it, the stock is gone from the godown and the customer owes us money.

This is why the work is split between four people. **Sales** says the order is real. **Warehouse** says the goods are really on the shelf. **Dispatch** says they really went out. **Accounts** says the money really came in.

One person cannot do all four. That is not the system being difficult — that is the system protecting your stock and your money.
